

NeuroProTM

(triterpenoid saponins 10%) Supplement

The professional choice to support cognitive function, promote mental performance and enhance physical capacity.

NeuroProTM is a professional product recommended by leading Canadian Neuroscientists

NeuroPro is a highly concentrated formulation of the components in ginseng – known as triterpenoid saponins (ginsenoside fraction) – which has been found to promote brain health by reducing inflammation and oxidative stress.* Each capsule contains 45mg of triterpenoid saponins.

NeuroPro is approved by Health Canada as a Natural Health Product (license #80036879), and is sold in the USA as a dietary supplement.

NeuroPro has been developed for individuals who desire to support cognitive and physical capacity through dietary supplementation.* The label instructions recommend 3 capsules, 2x/day, for a total of 270mg/day of triterpenoid saponins.

RESEARCH

The triterpenoid saponins found in ginseng have been shown to support cellular health, helping fight against oxidative stress.* Triterpenoid saponins have also been shown to support neurotransmitters and cell to cell signalling pathways that may result in improved concentration and mental performance.*

NeuroPro's triterpenoid saponin fraction has been tested in highly predictive models to provide support for cognitive function.* For additional information, and to view published research visit: www.neuroprotection.ca.

NeuroPro™

(triterpenoid saponins 10%) Supplement

QUALITY

The ingredients in **NeuroPro** must pass one of the most rigorous quality control protocols in the supplement industry - far greater than most other dietary supplement products on the market today. Tests are performed to determine safety for pesticides, solvents, heavy metals, bacteria, fungi and yeast. In addition, tests are performed for at least 8 specific triterpenoid saponins in order to assure a standardized product. **NeuroPro** is manufactured under government audited Good Manufacturing Practices and meets the stringent quality standards of the USP (U.S. Pharmacopeial Convention).

SIDE EFFECTS

Some people may experience insomnia, anxiety or headaches, in which case discontinue use.

POTENTIAL DRUG INTERACTIONS

Due to its ginseng content, **NeuroPro** may interact with some pharmaceutical drugs. Some potential interactions are listed below:

- Ginseng may interact adversely with MAO inhibitors and anti-psychotics.
- Ginseng may interact with nervous system stimulants such as methylphenidate (Ritalin), caffeine, etc.
- Ginseng may interact with blood thinners such as Coumadin (warfarin).
- Ginseng should be used with caution in those taking blood pressure medications such as ACE inhibitors and angiotensin-II-receptor antagonists.
- Studies indicate that panax ginseng may effect blood glucose levels.
- **NeuroPro** is not recommended in pregnancy and nursing.

NEURODYN

NeuroPro has been developed by **Neurodyn Inc.** (neurodyn.ca), a Canadian biotech company which is focused on developing diagnostics and treatments for supporting cognitive health.
